

“Bertuğ” National Simulation and Command & Control Software Suite Used in Exercise EFES-2026

17.04.2026, İzmir

“Bertuğ” National Simulation and Command & Control Software Suite, developed by ETE Technology Inc., was successfully deployed in Exercise EFES-2026 — the largest joint exercise of the Turkish Armed Forces, conducted for the fifth time this year.

The exercise brought together 300 personnel, including 36 foreign participants, and stands as one of the most significant milestones in modernizing the operational readiness infrastructure of the Turkish Armed Forces.

The simulation-supported command post phase of Exercise EFES-2026 kicked off in Istanbul, marking a historic milestone as "Bertuğ" National Simulation and Command & Control Software Suite was used for the first time in Türkiye. The exercise brought together more than 300 personnel from 12 countries, including 36 foreign participants.

“Bertuğ” Software Suite

Developed by ETE Technology Inc. since 2016, "Bertuğ" Software Suite is a cutting-edge modeling and simulation system built on a state-of-the-art architecture. The suite provides comprehensive support for exercise planning, operational planning, strategic analysis, and wargaming activities across all operational domains of the Turkish Armed Forces — including land, air, maritime, cyber, and space.

About the Company

Founded in 2016, ETE Technology (ETE Deney Eğitim ve Değerlendirme Teknolojileri A.Ş.) is a defense and security technology company specializing in research, development, and product innovation across defense, security, and safety domains. The company is headquartered in the Aegean Free Zone, where it operates fully integrated R&D, product development, and production facilities certified to both national and NATO industrial security standards. ETE Technology further extends its global reach through a branch office in Doha, Qatar.
